

What to expect at the lab.

AIGovOps Foundation - Framework Lab for AIGovOps Auditors - virtual

What you'll do

Find every AI. Sign what matters. Hand the auditor a bundle. 30 minutes total, in your browser, with about 100 of us doing it together.

What to bring

A laptop. A modern browser (Chrome, Edge, Safari, or Firefox). Nothing to install. Your private keys never leave your tab.

How to prepare

Run the 30-second pre-event diagnostic the day before. It confirms your browser is ready: WebCrypto, localStorage, CDN access. We'll send the link in the reminder email.

Today's timeline

0:00 - 0:05	Welcome and overview
0:05 - 0:18	Walk the 5-step Studio together
0:18 - 0:25	Sandbox: sign your first receipt
0:25 - 0:35	Map a real failure to controls
0:35 - 0:50	Quiz and signed completion certificate
0:50 - 1:25	Level 200 preview and Q & A
1:25 - 1:30	Close

Scan to open the lab

<https://bobrapp.github.io/aigovops-beacon/lab.html>

If the QR fails to scan, type the URL above into any modern browser.

What you'll leave with

An Ed25519-signed completion certificate, a downloadable evidence bundle, and one real-world AI failure mapped to the framework controls and the Beacon artifact that would have caught it.
